AIRA
Textile Architecture

Malleability, tactile luxury and vertical or furniture applications

Beyond the Floor

Wall-Coverings & Upholstery **AIRA** is more than a textile; it is a technical solution for avant-garde interior design.

Its exceptional fineness and organic drape transform it into a "textile skin" capable of adapting to the most demanding furniture contours and wall verticality.

It represents the ultimate expression of alpaca applied to constructive detail.

Malleability & Drape

50% lighter than standard double-weave structures, **AIRA** conforms with millimeter precision - ideal for high-end upholstery requiring sharp, clean edges.

Acoustic Comfort

When applied as a wall-covering, it provides an incomparable visual texture along with the natural thermal warmth and sound absorption inherent to alpaca fiber.

Bespoke Integration

Available in solid or melange finishes, **AIRA** integrates seamlessly into wall panels or bespoke furniture pieces, maintaining a soft hand and superior technical resistance.
